

FOR IMMEDIATE RELEASE

Summus Technology Named an OpenAI Select Partner

Bedford, United Kingdom – 11 August 2026 — Summus Technology Solutions Ltd, a UK-based technology consultancy specialising in Microsoft Azure, data engineering and enterprise AI solutions, today announced that it has been named an OpenAI Select Partner within the OpenAI Partner Network.

The OpenAI Partner Network is a global program for partners to build, sell, and deliver AI solutions with OpenAI. It brings together partners with deep industry expertise, delivery capabilities, and customer relationships while equipping them with resources, enablement, and support to help enterprises adopt OpenAI frontier models and products and turn them into measurable impact.

As an OpenAI Select Partner, Summus Technology will continue working with OpenAI to help organizations build, deploy, and scale AI solutions responsibly and effectively. This work will help organizations get more useful work from every token and stronger performance per dollar with GPT-5.6, while using ChatGPT Work to turn ambitious goals into finished work. Summus Technology designs and delivers secure, production-grade generative AI — including Retrieval-Augmented Generation assistants, AI agents and AI-enabled engineering automation — that improves operational efficiency for organizations across regulated and operationally critical environments.

“Being named an OpenAI Select Partner recognises the real, hands-on results we deliver with OpenAI’s models,” said Sujit Singh, Chief Technology Officer, Summus Technology. “Our focus is practical impact — using OpenAI’s frontier models within secure, well-governed architectures to help our customers work faster, reduce cost and make better decisions. We look forward to deepening our work with OpenAI to turn AI ambition into measurable business outcomes.”

Summus Technology supports organizations across Retail, Media, Education, Finance and Government services with AI consulting, generative AI and Retrieval-Augmented Generation solution development, platform engineering, data engineering and secure cloud delivery on Microsoft Azure. Its work includes delivering a Retrieval-Augmented Generation assistant that improved operational efficiency across a large public-sector transformation programme, and AI-assisted engineering automation that raised software quality and reduced technical debt at scale.

Looking ahead, Summus Technology plans to expand its OpenAI-related offerings, invest in talent and enablement, and develop new industry solutions, helping customers translate AI ambition into business outcomes.
